

# DEVELOPING UKRAINE'S TRANSPORT AND LOGISTICS SECTOR UNDER THE CONDITIONS OF REINTEGRATION OF LIBERATED TERRITORIES

PROFESSOR OKSANA KRYVORUCHKO, DOCTOR OF ECONOMIC SCIENCES.

ASSOCIATE PROFESSOR NADIIA BOCHAROVA, PHD.

KHARKIV NATIONAL AUTOMOBILE AND HIGHWAY UNIVERSITY

## Transport and logistics sector of Ukraine

A blue and white airplane is flying over a city skyline. In the foreground, a blue truck is visible. The background shows a city with various buildings, including a prominent skyscraper. The sky is blue with some clouds.

In recent years, Ukraine has faced serious challenges in its transport and logistics sector due to the armed conflict on its territory.

However, over time, Ukraine has liberated a significant portion of its occupied territories and has started the process of their reintegration.

The development of the transport and logistics sector is one of the key aspects of this process, as it provides mobility for people and goods, as well as infrastructure for trade between states.

## The reintegration of the transport sector in the liberated territories

The loss of control over territories has led to a sharp decrease in the volume of cargo transportation associated with these territories. Companies previously engaged in transportation to these regions were forced to seek new routes and opportunities, which resulted in increased transportation costs and decreased logistics efficiency.

Overall, the reintegration of the transport sector in the liberated territories after the end of the military operations in Ukraine is a massive task that requires a comprehensive approach and cooperation from various stakeholders, including the government, local communities, business community, international partners, and experts in the field of transport infrastructure. However, with proper organization and implementation of activities, prospects for the development of the transport sector in the liberated territories can be significant.

## Problems in the transport and logistics industry

Overall, after the start of large-scale military action in Ukraine, the transport and logistics industry faced serious problems that require the search for new solutions and approaches. Despite the difficulties, Ukrainian companies continue to work on improving logistics processes and developing new transportation routes. Thus, the loss of territories as a result of the military conflict in Ukraine has led to serious problems in the transport and logistics industry, requiring new solutions and approaches to ensure the efficiency and sustainability of logistics processes in the region.

The conflict has also led to security problems for transportation companies operating in regions where hostilities continue. This has caused many companies to suspend or limit their operations, further complicating logistics operations in these regions.

Reintegrating liberated territories in Ukraine's transport and logistics sector after the end of military operations is a complex task that requires the integration of various aspects such as infrastructure, security, logistics, and collaboration with international partners. However, implementing these measures has encountered a number of problems. Firstly, the presence of destroyed infrastructure and instability in the conflict zone makes investing in the region risky. Secondly, it is necessary to ensure the coherence of different modes of transport and create unified logistics chains to provide the most efficient delivery of goods. This requires closer cooperation between government agencies, private companies, and local communities.

## Development of Ukraine's transport and logistics complex

The development of Ukraine's transport and logistics complex in the context of reintegrating liberated territories is a key factor in the Country's economic recovery and improving its competitiveness in the international market. Achieving this task requires joint efforts from government agencies, private companies, and local communities, as well as innovative approaches and sustainable investments in the development of transport and logistics infrastructure.

To ensure stable and effective development of Ukraine's transport and logistics complex after the end of military operations, it is necessary to improve the investment climate in the country and ensure transparency in managing this sector. Moreover, it is important to develop the human capital, provide quality training and development for transport and logistics workers.

Thank you for your attention!
